ACC WRESTLING CHAMPIONSHIP

2026 Matchup Prediction Report

Machine Learning Model Predictions Across All 10 Weight Classes

■ POWERED BY MACHINE LEARNING

Weight	Predicted Champion	School	Model Consensus
125 lbs	**Eddie Ventresca**	Virginia Tech	■ Unanimous
133 lbs	**Aaron Seidel**	Virginia Tech	■■ 3/4 MODELS
141 lbs	**Gable Porter / Ryan Jack**	Virginia / NC State	■■ Split Decision
149 lbs	**Koy Buesgens**	NC State	■ Unanimous
157 lbs	**Daniel Cardenas**	Stanford	■ Unanimous
165 lbs	**Will Denny**	NC State	■ Unanimous
174 lbs	**Matthew Singleton**	NC State	■■ 3/4 MODELS
184 lbs	**Jake Dailey**	North Carolina	■■ 3/4 MODELS
197 lbs	**Sonny Sasso / Mac Stout**	Virginia Tech / Pitt	■■ Split Decision
285 lbs	**Isaac Trumble**	NC State	■ Unanimous

This report uses four machine learning models (Logistic Regression, Decision Tree, XGBoost v1, XGBoost v2) trained on historical ACC wrestling data to predict match outcomes.

THE PREDICTION MODELS

Four machine learning models, each using different algorithms and feature sets

MODEL 1 — LOGISTIC REGRESSION

BASELINE MODEL

Logistic Regression estimates the probability of a binary outcome (win/loss). It finds the best-fit line through data, then applies a sigmoid function to convert scores into probabilities between 0 and 1. Simple, interpretable, and serves as a strong baseline — if a wrestler has a significantly higher win rate, this model predicts them to win.

Features: 1 feature: win_rate_diff (home win rate minus away win rate)

MODEL 2 — DECISION TREE

33 FEATURES

A Decision Tree builds a flowchart of if/else rules learned from data. It splits on the feature that best separates winners from losers at each node. Naturally handles non-linear relationships — you can trace exactly why the model predicted a given outcome.

Features: 33 features: wrestled_before · home_point_diff_rematches · home_pinned_away · matches_wrestled_diff · win_rate_diff · bonus_rate_diff · pin_count_diff · avg_point_diff_diff · avg_points_scored_diff · std_point_diff_diff · weight_class encodings (10) · home academic class encodings (7) · away academic class encodings (7)

MODEL 3 — XGBOOST v1

33 FEATURES

XGBoost builds an ensemble of decision trees sequentially — each new tree corrects errors of the previous ones. Highly accurate, handles missing data natively, and captures complex non-linear feature interactions that simpler models miss.

Features: 33 features (same as Decision Tree above)

MODEL 4 ★ — XGBOOST v2

★ BEST MODEL — 34 FEATURES

Same XGBoost algorithm as Model 3, but with one critical additional feature: team_rank_diff — the difference in national team rankings between the two wrestlers' programs. This captures coaching quality, depth of daily competition, program resources, and recruiting strength — contextual signals not visible in individual statistics alone.

Features: 34 features (all Decision Tree features) + team_rank_diff ← UNIQUE TO THIS MODEL. team_rank_diff reflects that a wrestler from a top-ranked program is likely battle-tested against elite competition every day in practice.

HOW TO INTERPRET THE AGREEMENT %

Understanding model consensus across all four algorithms

Agreement % Formula: Agreement % = (Matchups where ALL 4 models predict the same winner) ÷ (Total matchups) × 100

Example: In the 157 lbs weight class, there are 21 possible matchups. All 4 models agreed on the same winner in 19 of them — giving 19/21 × 100 = **90.5% agreement**.

How to read it:

Agreement %	Interpretation
90 – 100%	Very high confidence — models strongly agree
75 – 89%	High confidence — a few close, unpredictable matchups
60 – 74%	Moderate confidence — several contested matchups
Below 60%	Low confidence — many unpredictable matchups

■ **Unanimous** = All 4 models predict the same champion

■■ **No unanimous** = At least one model disagrees on the champion

✓ in the matchup table = All 4 models agree on the winner of that bout

✗ in the matchup table = At least one model disagrees on the winner

125 lbs WEIGHT CLASS

Model Agreement: 85.7% | Total Matchups: 21
